

avast! File Server Security

As a stand-alone, high-performance server security solution, avast! File Server Security has always scanned all the traffic that your servers handle and provided powerful protection against infections. Now, it also gives you fast cloud-based features like streaming updates and file reputation warnings – accelerating the flow of information on new threats down to the final endpoint users.

Key Features – avast! File Server Security

ANTIVIRUS AND ANTI-SPYWARE ENGINE

Innovative scanning engine protects against viruses, spyware, and other malicious agents.

HEURISTICS ENGINE

Proactively finds malware which is undetectable with normal definitions and virus signatures.

REAL-TIME ANTI-ROOTKIT PROTECTION

Prevents stealth malware (rootkits) that, when loaded by the computer's OS, are invisible to ordinary scanners.

new! STREAMING, REAL-TIME VIRUS DATABASE UPDATES

Now you get each virus signature sent to you in real-time via connection to the AVAST Virus Lab cloud, rather than needing to wait for a traditional database update. Your database will be continuously updated with the latest definitions.

new! FILE REPUTATION SYSTEM

FileRep lets you know whether a file is safe before you open it – determined in part by how many people have the file and how new the file is. The technology is also used internally, to help the scanning engine make more intelligent decisions.

INTELLIGENT SCANNER

Reduces the number of required file scans up to 80% through a white list of safe applications. Files identified as safe are not rescanned unless they change.

GREEN COMPUTING

Leaves a minimal "footprint," due to its efficient and effective technology.

MULTI-THREADED SCANNING OPTIMIZATION

Allows the splitting of large files between cores, which accelerates the scanning process on new multi-core CPUs and makes avast! run even faster.

SCHEDULED SCANNING

Allows users to define the scan start time and files to be scanned.

SYSTEM REQUIREMENTS:

Windows 2008/R2, 2003 server,
Windows SBS 2011, 256/512 MB RAM,
200 MB of free hard disk space

Microsoft SharePoint Server
2003/2007/2010

CERTIFICATION:

CODE EMULATOR

Uses dynamic translation (much faster than traditional emulation) for both generic unpacking and within the heuristics engine.

BOOT-TIME SCANNER

Scans your computer for infections before the OS can start to activate any viruses beneath it (now applies also to 64-bit versions of Windows 7 and Windows Vista).

POTENTIALLY UNWANTED PROGRAM DETECTION

Detects potentially unwanted programs, such as remote admin tools and commercial key loggers. Custom rules can be set for dealing with these types of programs.

INTEGRATED PROTECTION FOR FILE SERVER

Includes high-performance scanning, superior scalability, and integrates perfectly with Microsoft SharePoint via Microsoft's own virus-scanning APIs.

SHAREPOINT SERVER PLUGIN

Tightly integrates with SharePoint 2003/2007/2010 Servers via Microsoft's own AV interfaces.

LOW RESOURCE USAGE

Stays light on system resources.
