

avast! Mobile Security

avast! Mobile Security provides complete Android antivirus protection, to protect you from malicious data-stealing apps. And its Anti-Theft component gives you many remote SMS-/web-based options for locating and recovering your device. Privacy reports, call/SMS filtering, and other features give you even more control over what data goes in and out. Recommended by: Android Police, AndroidAuthority, CNET, Computerworld, Droid-Life, eSecurityPlanet, Ghacks, Gizmodo, Phandroid, TechHamlet, ZDNet, and others. For commercial use.

* For rooted phones only

Key Features

new! AVAST! WIDGET

Displays a status bar on your phone's desktop, providing instant easy access to your Android antivirus app.

new! NETWORK METER

Shows how much data transfers into and out of your phone via 3G and/or Wi-Fi connections. See stats for the day, month, or year, with direct access to the App Manager if you want to make changes.

new! SITECORRECT

Enables auto-correct of mistyped URLs (e.g. goggle.com -> google.com), with options for 'auto-redirect' or 'request confirmation'.

new! AVAST! ACCOUNT INTEGRATION

See the status of your devices in your avast! Account.

improved! USER INTERFACE

Works even on your Android tablet, as the UI has been optimized for tablet display.

ANTIVIRUS

Performs on-demand scans of all installed apps and memory card content, as well as on-access scans of apps upon first execution. Options for scheduling scans, virus definition updates, uninstalling apps, deleting files, or reporting a false-positive to our virus lab.

PRIVACY REPORT

Scans and displays (grid) access rights and intents of installed apps, identifying potential privacy risks, so you know how much info you are really providing to each app.

SMS/CALL FILTERING

Filter calls and/or messages from contact list using set parameters based on day(s) of the week, start time, and end time. Blocked calls redirect to voicemail, while blocked messages are stored via filter log. Also possible to block outgoing calls.

APP MANAGER

Similar to Windows Task Manager, it shows a list of running apps and their size (MB), CPU load, used memory, and number of threads and services - with an option to stop or uninstall.

SYSTEM REQUIREMENTS:

Operating Systems Supported:

Android 2.1.x Android 3.x
 Android 2.2.x Android 4.x
 Android 2.3.x

MINIMUM HARDWARE REQUIREMENTS:

Any phone capable of running a supported system

AWARDS:

WEB SHIELD

Part of the avast! WebRep cloud, the avast! Web Shield for Android scans each URL that loads and warns you if the browser loads a malware-infected URL.

improved! FIREWALL

Add a firewall to stop hackers. Disable an app's internet access when using Wi-Fi, or when using 3G or roaming mobile networks. Now it's also possible to define custom rules for the firewall and to see an in-depth firewall log. (Works only on rooted phones.)

avast! Anti-Theft

new! WEB-BASED CONTROL

Allows you to control your phone's Anti-Theft options directly from your avast! Account web portal.

APP DISGUISE

After downloading avast! Anti-Theft, user can choose a custom name that disguises the app (e.g. call it „Pinocchio game“) so that it is even harder for thieves to find and remove.

STEALTH MODE

Once anti-theft is enabled, the app icon is hidden in the app tray, leaving no audio or other trace on the target phone – the app is „invisible“, making it difficult for thieves to detect or remove.

SELF-PROTECTION

Extremely difficult for thieves to remove (especially on rooted phones), Anti-Theft protects itself from uninstall by disguising its components with various self-preservation techniques. On rooted phones it is able to survive hard-resets and can even disable the phone's USB port.

BATTERY SAVE

Anti-Theft only launches itself and runs when it needs to perform tasks. This preserves battery life and makes it very difficult for thieves to shut it down.

SIM-CARD-CHANGE NOTIFICATION

If stolen and a different (unauthorized) SIM card inserted, the phone can lock, activate siren, and send you notification (to remote device) of the phone's new number and geo-location.

TRUSTED SIM CARDS LIST

Establish a „white list“ of approved SIM cards that can be used in the phone without triggering a theft alert. You can also easily clear the trusted SIM cards list, to leave the one present in the phone as the only trusted one.

REMOTE SETTINGS CHANGE

A setup wizard guides the user through the installation process on rooted phones by either writing directly or by generating an update file. No command-line knowledge is necessary to install Anti-Theft rooted. Also supports upgrading the app.

Remote Features

REMOTE SIREN

Option to sound a loud siren, which returns always to maximum volume if thieves try to silence. This siren sound can also be customized (e.g. record own siren sound or select siren sound from file).

REMOTE LOCK

To protect your data, phone can be locked remotely and then cannot be accessed again without entering the password specified by the user.

LOCK PHONE SETTINGS ACCESS

Enables remote locking of the phone's App Manager and/or phone settings.

REMOTE DISPLAY

Remotely send a customized message to locked or non-locked phone display (e.g. with a reward for its return).

REMOTE LOCATE

Remotely locate phone via GPS, WiFi, or mobile network – for maximum accuracy. Can locate either once or continuously (GPS can be auto-enabled on all rooted phones or non-rooted phones from Android 1.6 to 2.2).

REMOTE MEMORY WIPE

Remotely trigger a full, permanent wipe of all phone data (e.g. contacts, call log, SMS/MMS, browser history, apps, email accounts), including reliable, physical wipe of all memory cards from Android 2.2 on (limited functionality on older versions).

REMOTE CALLING

Remotely have the phone call you elsewhere with screen blackened, so that thieves cannot see it. This way you can listen to the phone's surroundings.

REMOTE FORWARDING

Remotely activate/deactivate option to forward or copy call data and /or SMS messages to another device. Call data goes to remote device, but not the call itself. SMS messages, however, are forwarded in their entirety („CC“ copies also to original device).

REMOTE „LOST“ NOTIFICATION

Remotely send a „Lost“ command to trigger same actions as SIM card change (e.g. phone lock, siren, or USB lock). „Found“ command deactivates „Lost“ command.

REMOTE SMS SENDING

Remotely trigger phone to send an SMS to another phone. That way, if you forget the phone somewhere, you can reply nonetheless to incoming calls or SMS messages.

REMOTE RESTART

Reboot the phone by SMS command, which will lock the phone by asking for the SIM's PIN code. (Works only on rooted phones.)

REMOTE HISTORY

Query the call log, contacts, and SMS messages remotely (with each forwarded as a separate SMS message, but able to be filtered).

LOW BATTERY NOTIFICATION

Phone is able to send low battery notification to a secondary device.

REMOTE SETTINGS CHANGE

All of the Anti-Theft settings can be changed remotely.
